### DETAILED ACTION

1. Claims 1-37 were examined.

#### ***Allowable Subject Matter***

2. Claims 1-37 are allowed.

3. The following is an examiner's statement of reasons for allowance:

While US Patent 6,603,476 teaches a CAD (computer-aided design) system comprising: a data processing system comprising a CAD application the CAD application being executed by the data processing system to generate a CAD model of a physical model, the CAD model comprising a plurality of CAD representations wherein each CAD representation corresponds to an individual component part of the physical model; and (claim 1); US Patent 4,918,627 teaches a method for generating a CAD (computer-aided design) model of a corresponding physical model comprising a plurality of component physical parts, the method comprising the steps of (claim 15); Ouhyoung et al., "A Three-Dimensional Building Authoring Tool Based on Line Drawing Understanding" teaches a program storage device readable by a recongintion machine,tangibly embodying a program of instruccions executable by the machine to perform method steps for generating a CAD (computer-aided design) model None of these references, taken either alone or in combination, with the prior art of record disclose a tracking system for generating tracker data associated with a given component part, (claim1) including:

*(claim 1) "wherein the CAD application processes the tracker data to generate a CAD representation of the given component part and to determine the position and orientation of the given component part with respect to the physical model before and after the given component part is placed in a desired position in the physical model,"*

*(claim 15) "tracking coordinates of the relevant points of the CAD representation of the component physical part in relation to coordinates of the CAD model before and after the physical component part is placed in a desired position in the physical model; and adding the CAD representation of component physical part to the CAD model such that the CAD model comprises an ensemble of individual CAD representations of component physical parts,"*

*(claim 27) "of generating a CAD representation of a given component physical part based on relevant points of the component physical part; tracking coordinates of the relevant points of the CAD representation of the component physical part in relation to coordinates of the CAD model before and after the physical component part is placed in a desired position in the physical model; and adding the CAD representation of component physical part to the CAD model such that the CAD model comprises an ensemble of individual CAD representations of component physical parts,"*

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the applicant's invention defines over the prior art of record.
